

match_parens find mismatches of various brackets and quotes

doc generated from the script with `gendoc`

ruby script, version=1.45

Synopsis

```
match_parens [filename]
```

Options

<code>-h</code>	print this help and exit
<code>-H, --help</code>	print full documentation and exit
<code>-V, --version</code>	print version and exit
<code>-l, --latex</code>	convert “...” to “...” before testing
<code>-n, --number=N</code>	set number of mismatching characters shown to N (default: 10)
<code>-p, --pairs=S</code>	set matching pairs to S (default: <code>[]()“”«»‘’””</code>)
<code>--test</code>	do an internal test and exit

Description

Mismatches of parentheses, braces, (angle) brackets, especially in TeX sources which may be rich in those, may be difficult to trace. This little script helps you by writing your text to standard output, after adding a left margin to your text, which will normally be almost empty, but will clearly show up to 10 mismatches. (Just try me on myself to see that the parenthesis starting this sentence will not appear to be matched at the end of the file. If you look at me in the vim editor, then select this paragraph and try the command: `:%`.)

By default, the following pairs are tested:

<code>()</code>	round brackets or parentheses
<code>{}</code>	curly brackets or braces
<code>[]</code>	square brackets
<code><></code>	angle brackets (within html text only)
<code>""</code>	ASCII double quotes
<code>"""</code>	Unicode double quotation marks
<code>''</code>	ASCII single quotes
<code>''</code>	Unicode single quotation marks

The exit value of the script is 0 when there are no mismatches, 1 otherwise.

Angle brackets are only looked for inside HTML text, where HTML is supposed to start with `<html>` or `=begin_rdoc` and to end with `</html>` or `=end`.

Options

<code>-h, --help</code>	print short help information and exit.
<code>-H, --Help</code>	print full documentation via less and exit.
<code>-V, --version</code>	print this script's version and exit.
<code>-l, --latex</code>	convert <code>``...''</code> to <code>“...”</code> before testing.
<code>-n, --number=N</code>	Set number of mismatching characters shown to N. By default, only the first 10 are shown.
<code>-p, --pairs=S</code>
